

FASTER FOUNDATIONS FOR EXTENSIONS

Using Steel Ring Beam and Helical Piles

Tree Friendly Foundations

- No need for deep excavations required when building near trees
- TPO friendly
- Approved by arborists within 'tree root zones'

Drain Safe

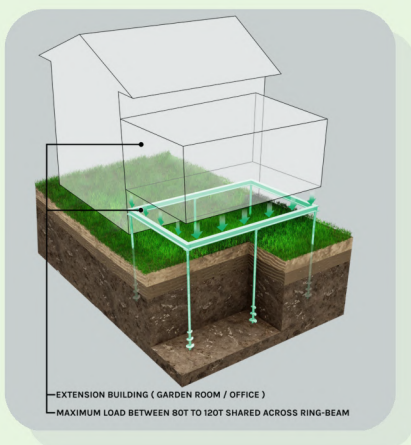

- No bridging over details needs
- Installation around the drains - not over them!

Fast Installation

- No waiting for concrete to cure and settle
- All piles installed and capped off - end of day 1
- Steel Ring Beam ready to use - end of day 2
- Load bearing slab ready to use - end of day 3

Stop Digging !

- No need to remove soil
- No trenches or concrete required
- Keeps the site clean and customers happy
- Ideal for sites with restricted access - terraced houses

Cost Effective

- Same cost but less time and labour as traditional foundations
- Cheaper than trench & concrete when deeper foundations (2m ++) are required for trees, drains, gradients, etc.

Qualified and Insured Design

- All projects designed and overseen by qualified Structural Engineers
- All designs covered by structural £5M PI insurance

Offsite Bases Limited
